

Aircare FACTS® Fire Trainers

Inflight Fire Simulators

Heat, Smoke . . . Fire.

No other emergency training can provide the realism and build the crewmember's skills and confidence as well as the drills in the Aircare FACTS® Aircrew Emergency Procedures Simulators. The Aircare FACTS® FIRE Fleet allows crew members to experience inflight fire fighting in an enclosed business aircraft type environment.

The simulator produces smoke and live fire from three separate locations; an enclosed lavatory, a galley and cabin divan seating area. Crewmembers use smoke hoods, protective gear and fire extinguishers to combat fire in these spaces.

About Aircare FACTS® Training

Aircare FACTS® Training is recognized as the most experienced and respected crewmember safety, medical and emergency training institution in business aviation. All Aircare FACTS® courses have unique, human factor based modules that are designed to provide pilots, and flight attendants the most thorough emergency, medical, evacuation and safety programs available while using the most innovative training equipment offered in the corporate aviation industry.
